

Update 4.03 2022/10/16

This update primarily cleaned up minor issues and clarified purchasing items. A few new capabilities and usability enhancements were also included.

Repairs and Fixes

- **Program Information Page**
 - In exceptional situations, the available and used counts of purchased classes would appear inaccurately on the program information page. This was fixed, and a check was inserted into the code to prevent this situation from reoccurring.
- **Purchase Step 1 Interface**
 - New protections were added to the Purchase Step 1 interface and the system to prevent an Individual Instructor Plan and a Shared Plan from getting out of sync, and making it impossible for other instructors to access the purchased classes.
 - Instructions on the Step 1 page were revised to provide better guidance to the user about the options.
- **Mange Teams > Assign Students to Teams**
 - Fixed “View # per page” to work correctly. Also, reset default to view 35 per page instead of 20.
- **Order-History Report**
 - Order Date was added to the report.

New Capabilities and Usability Enhancements

- **Normalized Grade Report**
 - Addition of Numeric Peer question sets to the questions the new report can calculate grades for.
- **Manage Questions**
 - A pair of changes to make the Manage Questions page easier to use and more understandable. The icons were enlarged and a Legend was added to the page.
- **Purchase Receipt Changes**
 - Titles and values printed on the receipt were adjusted and revised to provide additional information about the plan purchased.
